# CCC MCQs Questions with Explanation.

## CCC Quiz 7

**Directions:** Read the questions carefully and choose the right answer.

**1. The smallest unit of information a computer can understand and process is known as a .....**

- A. digit                      B. kilobyte                      C. bit                      D. byte                      E. None of these

**2. A device that connects to a network without the use of cables is said to be .....**

- A. distributed                      B. wireless                      C. centralized                      D. open source                      E. None of these

**3. Computers connected to a LAN (local area network) can .....**

- A. run faster                      B. go on line                      C. share information and/or share peripheral equipment  
D. e-mail                      E. None of these

**4. A file that contains definitions of the paragraph and character styles for your document and all things you customised like toolbars and menus is called a**

- A. Guide                      B. Pattern                      C. Base Document                      D. Template                      E. None of these

**5. Which grouping do you work with when formatting text in Word?**

- A. Tables, paragraphs and indexes                      B. Paragraphs, indexes and sections  
C. Characters, sections and paragraphs                      D. Indexes, characters and tables  
E. None of these

**6. The most common input devices are —**

- A. Microphone, printer                      B. Scanner, monitor                      C. Digital camera, speaker                      D. Keyboard, mouse  
E. None of these

**7. A ..... contains specific rules and words that express the logical steps of an algorithm.**

- A. programming language                      B. programming structure                      C. syntax  
D. logic chart                      E. None of these

**8. The person who writes and tests computer program is called a .....**

- A. Programmer                      B. Computer scientist                      C. Software engineer                      D. Project developer  
E. None of these

**9. All of the logic and mathematical calculations done by the computer happen in/on the .....**

- A. system board                      B. central control unit                      C. central processing unit                      D. mother board  
E. None of these

**10. With a CD you can .....**

- A. read                      B. write                      C. read and write                      D. either read or write  
E. None of these

**Correct Answers:**

1	2	3	4	5	6	7	8	9	10
C	B	C	D	C	D	C	A	C	A

**Explanations :**

**1.** A bit is the smallest unit of data in a computer. A bit has a single binary value, either 0 or 1.

Hence, option C is correct.

**2.** A wireless network is any type of computer network that uses wireless data connections for connecting network nodes.

Hence, the option B is correct.

**3. LAN:** Stands for "Local Area Network". A LAN is a computer network limited to a small area such as an office building, university, or even a residential home. Most mid to large-sized businesses today use LANs, which makes it easy for employees to share information. Typically, LANs use wired connections to link the computers to each other and to a variety of peripheral devices such as printers. Devices connected to a LAN are able to access data from any machine that's connected to the network. LAN users can communicate with each other by chat or email.

Hence, the option C is correct.

4. A file that contains definitions of the paragraph and character styles for your document and all things you customised like toolbars and menus is called a Template.

**Template:** -A template is a file that serves as a starting point for a new document. When you open a template, it is pre-formatted in some way. For example, you might use template in Microsoft Word that is formatted as a business letter. The template would likely have a space for your name and address in the upper left corner, an area for the recipient's address a little below that on the left side, an area for the message body below that, and a spot for your signature at the bottom.

Hence, option D is correct.

5. Characters, sections and paragraphs grouping works when text formatting in word.

**Formatting Text:** Word deals with formatting on three levels encompassing small and specific on up to big and broad—through characters, paragraphs, and sections. You apply different types of formatting to each of these parts. Character formatting includes selecting a font, a font size, bold or italics, and so on. At the paragraph level, you apply indents, bullets, and line spacing. For each section of your document (even if there's only one), you set the page size, orientation, and margins.

Hence, option C is correct.

6. Keyboard and mouse are the most common input devices.

Hence, option D is correct.

7. **Syntax** contains specific rules and words that express the logical steps of an algorithm.

In programming, syntax refers to the rules that specify the correct combined sequence of symbols that can be used to form a correctly structured program using a given programming language. Programmers communicate with computers through the correctly structured syntax, semantics and grammar of a programming language.

Hence, option C is correct.

8. A programmer, computer programmer, developer, coder, or software engineer is a person who writes computer software. The term computer programmer can refer to a specialist in one area of computer programming or to a generalist who writes code for many kinds of software.

Hence, option A is correct.

- 9.** A central processing unit (CPU) is the electronic circuitry within a computer that carries out the instructions of a computer program by performing the basic arithmetic, logical, control and input/output (I/O) operations specified by the instructions.

Hence, option C is correct.

- 10.** Compact disc (CD) is a polycarbonate with one or more metal layers capable of storing digital information. The most prevalent types of compact discs are those used by the music industry to store digital recordings and CD-ROMs used to store computer data. Both of these types of compact disc are read-only, which means that once the data has been recorded onto them, they can only be read, or played.

Hence, option A is correct.
