Maths Questions for CLAT Exam.

CLAT Maths Quiz 38

Directions: Read the following Questions carefully and choose the right answer:

1. $27.33 \times \left(\frac{567.33 - 438.79}{58.67} \right) = ?$

- A. 67.13 B. 59.85 C. 58.95 D. 55.98

2. The difference between two numbers is 1365. When larger number is divided by the smaller one, the quotient is 6 and the remainder is 15. The smaller number is

- A. 270 B. 250 C. 275 D. 280

3. Of the three numbers, the first is twice the second and the second is twice the third. The average of the reciprocal of the three numbers is $\frac{7}{72}$. The numbers are

- A. 7, 8, 22 B. 6, 12, 24 C. 12, 8, 10 D. 25, 6, 9

4. A school has only three classes which accommodate 40, 50 and 60 students respectively. If the pass percentages of these classes are 10%, 20% and 10% respectively, then the percentage of passed students in the school is

- A. 12% B. 15% C. $13\frac{1}{3}\%$ D. $12\frac{1}{5}\%$

5. If a certain sum amount to Rs. 108 in 2 years, and Rs. 112 in 3 years, find the principal and simple interest rate.

- A. 7% B. 5% C. 6% D. 4%

6. If $x = \frac{\sqrt{3} + 1}{\sqrt{3} - 1}$ and $y = \frac{\sqrt{3} - 1}{\sqrt{3} + 1}$, then find the value of $x^2 + y^2$.

- A. 19 B. 11 C. 14 D. 15

7. Point A is 10 cm from the centre of the circle. The length of the tangent drawn from Point A to the circle is 8 cm. Find the radius of the circle.

- A. 2 cm B. 4 cm C. 5 cm D. 6 cm.

8. There is a flower bed in the shape of trapezium. Its parallel sides are 60 m and 80 m respectively. If the distance between parallel sides is 20m, find the area of the flower bed.

- A. 1100 m^2 B. 1400 m^2 C. 1350 m^2 D. 1050 m^2

9. In a single throw of a fair die what is the probability that the number on the top is more than 2?

A. $\frac{2}{3}$

B. $\frac{3}{2}$

C. $\frac{5}{3}$

D. $\frac{3}{5}$

10. A man is standing at a distance of 25m from the bottom of the tree, and he finds that the angle of elevation of the top of the tree is 30° , find the height of the tree.

A. $\frac{15}{\sqrt{3}}$ m

B. $\frac{25}{\sqrt{3}}$ m

C. $\frac{19}{\sqrt{3}}$ m

D. $15\sqrt{3}$ m

Correct Answers:

1	2	3	4	5	6	7	8	9	10
B	A	B	C	D	C	D	B	A	B

Explanations:

1.

$$27.33 \times \left(\frac{567.33 - 438.79}{58.67} \right) = 27.33 \times \left(\frac{128.54}{58.67} \right)$$

$$= 27.33 \times 2.19 = 59.85$$

Hence, option B is correct.

2. Let the numbers be x and $1365 + x$.

$$\text{Then } 1365 + x = 6x + 15 \Rightarrow x = 270$$

Hence, option A is correct.

3. Let the third number be a .

Then, second number = $2a$ and first number = $4a$

According to the question,

$$\frac{\frac{1}{a} + \frac{1}{2a} + \frac{1}{4a}}{3} = \frac{7}{72}$$

$$\Rightarrow \frac{7}{4a} = \frac{7}{24} \Rightarrow 4a = 24$$

$$\Rightarrow a = 6, 2a = 12 \text{ and } 4a = 24$$

\Rightarrow The numbers are 6, 12 and 24.

Hence, option B is correct.

4. Total number of students = $40 + 50 + 60 = 150$.

Number of students securing pass marks

$$= \frac{10}{100} \times 40 + \frac{20}{100} \times 50 + \frac{10}{100} \times 60$$

$$= 4 + 10 + 6 = 20$$

$$= \frac{20}{40 + 50 + 60} \times 100 = 13\frac{1}{3}\%$$

Hence, option C is correct.

5. Amount after 2 years = Rs. 108

Amount after 3 years = Rs. 112

The amount of interest is always constant.

Therefore, interest for 1 year = Rs. 4

Hence, principal = $108 - 2(4) = \text{Rs. } 100$

$$\text{Rate of interest} = \frac{4 \times 100}{100 \times 1} = 4\%$$

Hence, option D is correct.

6.

$$\text{As } x = \frac{\sqrt{3} + 1}{\sqrt{3} - 1} \times \frac{\sqrt{3} + 1}{\sqrt{3} + 1} = \frac{3 + 1 + 2\sqrt{3}}{(\sqrt{3})^2 - (1)^2}$$

$$\Rightarrow x = 2 + \sqrt{3}$$

$$\text{and } y = \frac{\sqrt{3} - 1}{\sqrt{3} + 1} \times \frac{\sqrt{3} - 1}{\sqrt{3} - 1} = \frac{3 + 1 - 2\sqrt{3}}{(\sqrt{3})^2 - (1)^2}$$

$$\Rightarrow y = 2 - \sqrt{3}$$

$$\therefore x^2 + y^2 = (2 + \sqrt{3})^2 + (2 - \sqrt{3})^2 = 14$$

Hence, option C is correct.

7.

ΔABO is right angled at point B.

OB is the radius of the circle.

$$\therefore OA^2 = OB^2 + AB^2$$

$$\Rightarrow 10^2 = 8^2 + OB^2$$

$$\Rightarrow OB^2 = 36$$

$$\Rightarrow OB, \text{ i.e. the radius} = \sqrt{36} = 6\text{cm.}$$

Hence, option D is correct.

8.

$$\text{Area of trapezium} = \frac{1}{2} (\text{sum of the parallel sides}) \times \text{height}$$

$$= \frac{1}{2} (60 + 80) \times 20 = \frac{1}{2} \times 140 \times 20 = 1400 \text{ m}^2$$

Hence, option B is correct.

9. In a die there are 6 faces numbered 1, 2, 3, 4, 5 and 6.

So, the total number of possible events (1, 2, 3, 4, 5 and 6) = 6

and the total number of favourable events (3, 4, 5 and 6) = 4

$$\text{So, the reqd. probability} = \frac{4}{6} = \frac{2}{3}$$

Hence, option A is correct.

10.

Let h be the height of the tree

In $\triangle ACB$,

$$\tan 30^\circ = \frac{AB}{BC} = \frac{h}{25}$$

$$\text{So, } \frac{1}{\sqrt{3}} = \frac{h}{25} \Rightarrow h = \frac{25}{\sqrt{3}}$$

Hence, the height of the tree is $\frac{25}{\sqrt{3}}$ m.

Hence, option B is correct.
