9. The year next to 1987 having the same calendar as that of 1987 is :

- A. 1994 B. 1996 C. 1998 D. 1992

10. If you are thirteenth in a queue starting either end, how many persons are there in the queue?

- A. 20 B. 22 C. 23 D. 25

Correct Answers:

1	2	3	4	5	6	7	8	9	10
B	C	D	A	C	B	A	B	C	D

Explanations :

1. Ostrich is a flightless bird, whereas the other three can fly.

Hence, option B is correct.

2. Pattern of the given series.

Hence, option C is correct.

3.

Similarly

Hence, option D is correct.

4. First letter is coded as next letter.

Second letter is coded as second next letter.

Third letter is coded as third next letter and so on.

So,

D $\xrightarrow{+1}$ E
I $\xrightarrow{+2}$ K
M $\xrightarrow{+3}$ P
P $\xrightarrow{+4}$ T
L $\xrightarrow{+5}$ Q
E $\xrightarrow{+6}$ K

Hence, option A is correct.

5. Books are carried in a bag and 'bag' is called 'book'.

Hence, option C is correct.

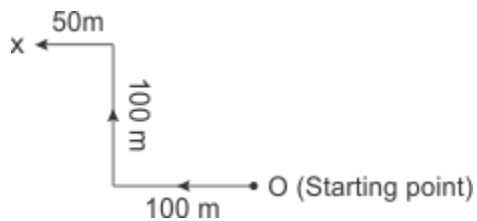

6. From the given information, we get

If Teena's mother was Uday's mother's only daughter,

Uday's mother's only daughter means Uday has only one sister who is Teena's mother. So, Uday is maternal-uncle of Teena.

Hence, option B is correct.

7. The movement is like

We have to assume that the backdoor faces the west.

Hence, option A is correct.

8. In an accurate clock, the hands of a clock coincide every $65 \frac{5}{11}$ minutes. But in this case, they are together again after 65 minutes, hence the clock gains time.

$$\text{Gain in 65 minutes} = \left(65 \frac{5}{11} - 65\right) = \frac{5}{11} \text{ minutes.}$$

∴ Gain in one day (24×60 min).

$$= \frac{5}{11} \times \frac{60}{65} \times 24 = \frac{5 \times 288}{143} \text{ min.} = 10 \frac{10}{143} \text{ min.}$$

Hence, option B is correct..

9. Starting with 1987, we go on counting the number odd days till the sum is divisible by 7.

$$\text{Number of odd days} = 1 (1987) + 2 (1988) + 1 (1989) + 1 (1990) + 1 (1991) + 2 (1992) + 1 (1993) + 1 (1994) + 1 (1995) + 2 (1996) + 1 (1997) = 14/7 = 0 \text{ odd days.}$$

So, the year next to 1987 having the same calendar as that of 1987 is 1998.
Hence, option C is correct.

10.

$$\text{Number of people in the queue} = 2 \times 13 - 1 = 25.$$

Hence, option D is correct
