### DI Info Chart Quiz 24

**Directions :** Study the following information carefully and answer the questions given beside.

Out of 200 people who attended a birthday party 100 had Ice-cream, 120 had cold drink, 80 had cake and 10 had none of these three. 100 people had exactly one of three items.

**1. How many people had exactly two of the three items?**

- A. 98                      B. 85                      C. 110                      D. 80                      E. 70

**2. If 20 people had only cold drink and ice-cream, then how many people had only cake?**

- A. 25                      B. 10                      C. 20                      D. 18                      E. 12

**3. If 15 people who had only cold drink, had cake also and 5 people who had only ice-cream and cake had cold drink also, then how many people had at least two of the three items?**

- A. 98                      B. 119                      C. 78                      D. 105                      E. 135

**4. If 30 people had only ice-cream, then how many people had at least one of cake or cold drink but not ice-cream?**

- A. 90                      B. 108                      C. 87                      D. 98                      E. 105

**5. What is the maximum possible number of people who had only cold drink?**

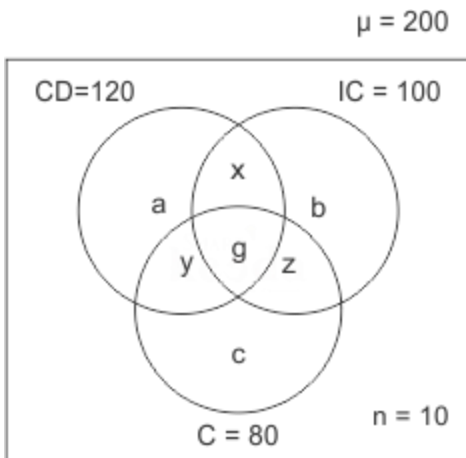

- A. 118                      B. 87                      C. 90                      D. 120                      E. 130

**Correct Answers:**

<b>1</b>	<b>2</b>	<b>3</b>	<b>4</b>	<b>5</b>
E	B	D	A	C

## Common explanation :

The given information can be represented in the following venn diagram.

CD = Cold drink

IC = Ice cream

C = Cake

It is given that,  $a + b + c = 100$

$a + b + c + x + y + z + g + n = \mu = 200$

$100 + (x + y + z) + g + 10 = 200$

$x + y + z + g = 90 \quad \dots(1)$

$CD + IC + C = (a + b + c) + 2(x + y + z) + 3g = 300$

$\rightarrow 2(x + y + z) + 3g = 200 \quad \dots(2)$

From (1) and (2), we get  $g = 20$

$x + y + z = 70$

## Explanations:

1. Following the common explanation, we get

The number of people who had exactly two of three = 70

Hence, option E is correct.

2. Following the common explanation, we get

It is given that  $x = 20$

$$y + z = 50$$

The number of people who had only cake =  $80 - 50 - 20 = 10$

Hence, option B is correct.

3. Following the common explanation, we get

15 people who had only cold drink had cake also, value of 'a' reduces by 15 and value of 'y' increase by 15.

5 people who had only ice-cream and cake had cold drink also.

i.e., value of 'z' decreases by 5 and that of g increases by 5. The number of people who had at least two of the three items

$$\rightarrow x + y + z + g = x + (y + 15) + (z - 5) + (g + 5)$$

$$\rightarrow x + y + z + g + 15 = 70 + 20 + 15 = 105$$

Hence, option D is correct.

4. Following the common explanation, we get

It is given that  $b = 30$

$$\rightarrow x + z = IC - b - g = 100 - 30 - 20 = 50$$

As,  $a + b + c = 100$ ,

$$a + c + y = 70 + 20 = 90$$

Hence, option A is correct.

5. Following the common explanation, we get

We need to find the maximum value of a.

a can be maximum when  $x + y$  is minimum.

$x + y$  can be minimum when  $z$  is maximum.

$$\text{As } g = 20 \text{ and } y + g + z + c = 80$$

$$Z_{\max} = 60 \text{ (} c_{\min} = 0 \text{)}$$

$$\text{As } x + y + z = 70, x_{\min} + y_{\min} = 10$$

$$a_{\max} = CD - y_{\min} - x_{\min} - g$$

$$\rightarrow 120 - 10 - 20 = 90$$

Hence, option C is correct.
