Line Chart Questions for IBPS RRB Scale I Pre Exams – Line Chart Quiz at Smartkeeda.

DI Line Chart No 51

Directions : Study the following line chart carefully and answer the questions given beside.

The line graph given below shows the number of sanitizer bottles sold by five different shops in two different weeks.

1. The number of sanitizer bottles sold by shop D in week 1 is what percent of the total number of sanitizer bottles sold by shop B and shop C in week 2?

- A. 52% B. 56% C. 64% D. 68% E. 58%

2. If the selling price of one sanitizer bottle in shop A and D is Rs. 50 each and each shopkeeper earns 25%, then what is the difference between the profit earned by shop A and shop D in week 1?

- A. Rs. 1400 B. Rs. 1650 C. Rs. 1800 D. Rs. 1200 E. Rs. 1050

3. If the number of sanitizer bottles sold by shop F in week 1 is 40% more than the number of sanitizer bottles sold by shop A in week 2 and the total sanitizer bottles sold by shop F in week 1 and week 2 together is 1310, what is the number of sanitizer bottles sold by shop F in week 2?

- A. 526 B. 576 C. 624 D. 475 E. None of these

4. What is the difference between the total number of Sanitizer bottles sold by Shop B in week 1 and week 2 together and the total number of Sanitizer bottles sold by Shop D in week 1 and week 2 together?

- A. 270 B. 240 C. 140 D. 190 E. 300

5. What is the average of the number of sanitizer bottles sold by shop C in week 1, Shop B in week 2 and Shop D in week 2?

- A. 780 B. 800 C. 840 D. 760 E. 820

Explanations:

1.

Total number of sanitizer bottles sold by shop B and shop C in week 2 = $820 + 680 = 1500$

$$\text{Reqd. \%} = \frac{840}{1500} \times 100 = 56\%$$

Hence, option B is correct.

2.

Smart Approach:

Selling price = Rs 50

$$\text{Cost price} = \frac{50}{125} \times 100 = \text{Rs } 40$$

$$\text{Profit} = 50 - 40 = \text{Rs } 10$$

Required difference = (Difference between the number of bottles sold by A and D) x Profit on each bottle

$$= (840 - 720) \times 10 = \text{Rs } 1200$$

Hence, option D is correct.

Traditional Approach:

Selling price = Rs 50

$$\text{Cost price} = \frac{50}{125} \times 100 = \text{Rs } 40$$

$$\text{Profit} = 50 - 40 = \text{Rs } 10$$

$$\text{Profit earned by shop A in week 1} = 720 \times 10 = \text{Rs } 7200$$

$$\text{Profit earned by shop D in week 1} = 840 \times 10 = \text{Rs } 8400$$

$$\text{Required difference} = 8400 - 7200 = \text{Rs } 1200$$

Hence, option D is correct.

3.

$$\text{Number of sanitizer bottles sold by shop F in week 1} = 560 \times 140\% = 784$$

$$\text{Number of sanitizer bottles sold by shop F in week 2} = 1310 - 784 = 526$$

Hence, option A is correct.

4.

$$\begin{aligned} \text{Total number of Sanitizer bottles sold by Shop B in week 1 and week 2 together} &= 640 + 820 \\ &= 1460 \end{aligned}$$

$$\begin{aligned} \text{Total number of Sanitizer bottles sold by Shop D in week 1 and week 2 together} &= 840 + 760 \\ &= 1600 \end{aligned}$$

$$\text{Required difference} = 1600 - 1460 = 140$$

Hence, option C is correct.

5.

$$\begin{aligned} \text{Total of the number of sanitizer bottles sold by shop C in week 1, Shop B in week 2 and Shop D in week 2} &= 700 + 820 + 760 = 2280 \end{aligned}$$

$$\text{Reqd. average} = \frac{2280}{3} = 760$$

Hence, option D is correct.
