# Date Interpretation Pie Chart Questions for SBI Clerk Pre and IBPS Clerk Pre Exams.

## DI Pie Chart Quiz 43

**Direction : Study the following pie charts carefully and answer the questions given beside.**

Pie chart shows the percent of students in five different classes in 2016.

Total Students in all the classes together = 1000

Second pie chart shows the average fee per student of five different classes in 2016.

Total average fee per student of five classes together = Rs.800

## Questions :

1. If in 2017, the average fee per student as well as the number of students is increased by 20% and 10% respectively from 2016 in class A, then what is the total revenue generated from class A in the year 2017?

- A. Rs. 43560      B. Rs. 33000      C. Rs. 36300      D. Rs. 39600      E. None of these

2. Total revenue generated from class C in 2016 is approximately what percent of the total revenue generated from class E in 2016?

- A. 48%      B. 58%      C. 68%      D. 64%      E. None of these

3. What is the ratio of the total revenue generated from class E in 2016 to the total revenue generated from class F in 2016 if number of students in class F is 20 more than the number of students in class B in 2016 and average fee per student in class F is Rs.50 more than the average fee per student in class B in 2016?

- A. 19 : 20      B. 16 : 25      C. 76 : 125      D. 125 : 76      E. None of these

4. What is the approximate average fee per student of classes C, D and E together in 2016?

- A. Rs. 150      B. Rs. 145      C. Rs. 155      D. Rs. 160      E. None of these

5. If in 2015, the number of students in class D was 50% more than the number of students in class D in 2016 and average fee per student of class D was 10% less than the average fee per student of class D in 2016, then what was the total revenue generated from class D in 2015?

- A. Rs. 45000      B. Rs. 40500      C. Rs. 67500      D. Rs. 60750      E. None of these

### Correct Answers:

1	2	3	4	5
A	B	C	C	D

## Answers :

1. Number of students in class A in 2016 = 22% of 1000 = 220

$$\text{Average fee per student in class A in 2016} = 800 \times \frac{67.5}{360} = \text{Rs. } 150$$

Number of students in class A in 2017 = 110% of 220 = 242

Average fee per student in class A in 2017 = 120% of 150 = Rs.180

Total revenue generated from class A in the year 2017 = Number of students  $\times$  Average fee per students =  $242 \times 180 = \text{Rs.}43560$

Hence, option A is correct.

2. Total revenue generated from class C in 2016 = Number of students  $\times$  Average fee per students

$$\Rightarrow (16\% \text{ of } 1000) \times \frac{800 \times 49.5}{360} = \text{Rs.}(160 \times 110)$$

Total revenue generated from class E in 2016 = Number of students  $\times$  Average fee per students

$$\Rightarrow (19\% \text{ of } 1000) \times \frac{800 \times 72}{360} = \text{Rs.}(190 \times 160)$$

$$\text{Reqd. \%} = \frac{160 \times 110}{190 \times 160} \times 100 = 57.89 \approx 58\%$$

Hence, option B is correct.

3. Total revenue generated from class E in 2016 = Number of students  $\times$  Average fee per students

$$\Rightarrow (19\% \text{ of } 1000) \times \frac{800 \times 72}{360} = \text{Rs.}(190 \times 160)$$

Number of students in class F = (18% of 1000) + 20 = 180 + 20 = 200

$$\text{Average fee per student in class F} = 800 \times \frac{90}{360} + 50 = 200 + 50 = \text{Rs.}250$$

Total revenue generated from class F = Rs.(200  $\times$  250)

Required ratio = (190  $\times$  160) : (200  $\times$  250) = 76 : 125

Hence, option C is correct.

4.

$$\text{Average fee per student} = \frac{\text{Total fee}}{\text{Total students}}$$

$$\text{Total fee of class C} = (16\% \text{ of } 1000) \times \left[ 800 \times \frac{49.5}{360} \right]$$

$$= 160 \times 110 = \text{Rs.}17600$$

$$\text{Total fee of class D} = (25\% \text{ of } 1000) \times \left[ 800 \times \frac{81}{360} \right]$$

$$= 250 \times 180 = \text{Rs.}45000$$

$$\text{Total fee of class E} = (19\% \text{ of } 1000) \times \left[ 800 \times \frac{72}{360} \right]$$

$$= 190 \times 160 = \text{Rs.}30400$$

$$\text{Total fee of classes C, D and E together} = \text{Rs. } (17600 + 45000 + 30400) = \text{Rs. } 93000$$

$$\text{Total students in classes C, D and E together} = 160 + 250 + 190 = 600$$

$$\text{Reqd. average} = \text{Rs. } \frac{93000}{600} = \text{Rs. } 155$$

Hence, option C is correct.

5. Number of students in class D in 2015 = 150% of 25% of 1000 = 375

$$\text{Average fee per student of class D in 2015} = 90\% \text{ of } \left[ 800 \times \frac{81}{360} \right] = \text{Rs.}162$$

$$\text{Total revenue generated from class D in 2015} = 375 \times 162 = \text{Rs.}60750$$

Hence, option D is correct.
