DI Line Chart Quiz 34

Direction : Study the following line charts carefully and answer the questions given beside.

The line graph given below gives the information about the percentage increase in the length of a python over the previous year in the first five consecutive years of its life. Assume that every python is born $200/3$ cm long.

Questions :

- 1. In the fourth year of its life, what was the increasement in its length over the previous year?**
A. 50 cm B. 80 cm C. 40 cm D. 60 cm E. None of these
- 2. The length of a 5-year-old python will be how many cm more than that of a 3-year-old python?**
A. 66 B. 77 C. 81 D. 78 E. None of these
- 3. The weight of a python of length greater than 175 cm but less than 180 cm is 200 kg. the weight of how many years old python will be 200 kg?**
A. 3 years B. 4 years C. 4.2 years D. 5 years E. Can't be determined

4. In the sixth year of its life, its length is increased by 50% over the previous year then what was the increase in length (in cm) in the sixth year of its life?

- A. 346.5 cm B. 324.5 cm C. 231 cm D. 115.5 cm E. None of these

5. In a forest, there are 6 four year old, 5 three year old, 4 five year old and 10 two year old pythons, then what is the average length of all the pythons of the forest?

- A. 165.24 cm B. 167.36 cm C. 176.84 cm D. 170.84 cm E. None of these

Correct Answers:

1	2	3	4	5
D	C	E	D	B

Common explanation :

Age	Length
First year	150% of 200/3 = 100 cm
2 nd year	125% of 100 = 125 cm
3 rd year	120% of 120 = 150 cm
4 th year	140% of 150 = 210 cm
5 th year	110% of 210 = 231 cm

Answers :

1. Following the common explanation, we get

The required answer = $210 - 150 = 60$ cm

Hence, option D is correct.

2. Following the common explanation, we get

The length of 3-year-old python = 150 cm

The length of 5-year old python = 231 cm

The required difference = $231 - 150 = 81$ cm

Hence, option C is correct.

3. Following the common explanation, we get

The range of length, greater than 175 cm and less than 180 comes in between 3 and 4 years old.

Therefore, the age of python will be greater than 3 year but less than 4 year

Hence we cannot determine the age of the python

Hence, option E is correct.

4. Following the common explanation, we get

The length of 5-year-old python = 231 cm

The increase in the length on the sixth year = 50% of 231 = 115.5 cm

Hence, option D is correct.

5. Following the common explanation, we get

The sum of the length of all the 25 pythons

$$= 6 \times 210 + 5 \times 150 + 4 \times 231 + 10 \times 125$$

$$= 1260 + 750 + 924 + 1250$$

$$= 4184 \text{ cm}$$

$$\text{The average} = 4184 / 25 = 167.36 \text{ cm}$$

Hence, option B is correct.
