Inequalities Questions for SBI Clerk Mains, IBPS Clerk Mains, SBI PO Pre and IBPS PO Pre Exams.

Inequalities Quiz 27

Directions: In these questions, relationship between different elements is shown in the statement. The statement is followed by two conclusions. Choose the correct answer on the basis of information given below.

1. **Statements :** $B > A \geq T > F = Y \leq S < D$

Conclusions : $F < D$, $A > S$

- A. Only conclusion I follows
- B. Either conclusion I or conclusion II follows
- C. Only conclusion II follows
- D. Both conclusions follow
- E. Neither conclusion I nor conclusion II follows

2. **Statements :** $Y < O \leq G \leq K = U > L > P$

Conclusions : $O = U$, $U > O$

- A. Only conclusion I follows
- B. Either conclusion I or conclusion II follows
- C. Only conclusion II follows
- D. Both conclusions follow
- E. Neither conclusion I nor conclusion II follows

3. **Statements :** $M < T < G \leq J = U > Y > R$

Conclusions : $G < U$, $J > R$

- A. Only conclusion I follows
- B. Either conclusion I or conclusion II follows
- C. Only conclusion II follows
- D. Both conclusions follow
- E. Neither conclusion I nor conclusion II follows

4. **Statements :** $3 \geq 9 < 7 \leq 10 = 2 \leq 6$

Conclusions : I. $6 > 9$ II. $9 \leq 2$

- A. Only conclusion I follows
- B. Only conclusion II follows
- C. Either conclusion I or conclusion II follows
- D. Both conclusions follow
- E. Neither conclusion I or conclusion II follows

5. **Statements :** $P \leq R \leq C = S > Q > T$

Conclusions : I. $P < Q$ II. $S \geq P$

- A. Only conclusion I follows
- B. Only conclusion II follows
- C. Either conclusion I or conclusion II follows
- D. Both conclusions follow
- E. Neither conclusion I or conclusion II follows

6. **Statements :** $L \geq Y \geq A < R,$ $S > Q = A \geq I$

Conclusions : I. $S > Y,$ II. $R > Q$

- A. Only conclusion I follows.
- B. Only conclusion II follows.
- C. Both conclusions follow.
- D. Either conclusion I or conclusion II follows.
- E. Neither conclusion I nor II follows.

7. **Statements :** $M < A \leq P > X,$ $P \geq B = C < Y,$ $C \geq D > F = L$

Conclusions : I. $P \geq D,$ II. $M < C$

- A. Only conclusion I follows.
- B. Only conclusion II follows.
- C. Both conclusions follow.
- D. Either conclusion I or conclusion II follows.
- E. Neither conclusion I nor II follows.

8. **Statements :** $J = X \leq U > Z,$ $M = N \geq U = P,$ $L = O < N \geq T$

Conclusions : I. $J < N,$ II. $O > U$

- A. Only conclusion I follows.
- B. Only conclusion II follows.
- C. Both conclusions follow.
- D. Either conclusion I or conclusion II follows.
- E. Neither conclusion I nor II follows.

9. **Statements :** $H \geq V = O > R,$ $X \leq D > Y > R,$ $Y > N = L < Z$

Conclusions : I. $O < D,$ II. $R > N$

- A. Neither conclusion I nor II follows.
- B. Only conclusion I follows.
- C. Both conclusions I and II follow.
- D. The conclusion II follows.
- E. Either conclusion I or II follows.

10. **Statements :** $C < R = X;$ $M = L > O = C;$ $X > L = I$

Conclusions : I. $O = X,$ II. $I < R$

- A. Neither conclusion I nor II follows.
- B. Only conclusion I follows.
- C. Both conclusions I and II follow.
- D. Only conclusion II follows.
- E. Either conclusion I or II follows.

Correct Answers:

1	2	3	4	5	6	7	8	9	10
A	B	C	A	B	B	A	E	A	D

Explanations :

1. **Statements:** $B > A \geq T > F = Y \leq S < D$

Conclusions: $F < D$, $A > S$

For conclusion I: $F < D$

Here, the common sign between F and D is '<', hence $F < D$.

Thus conclusion I follows.

For conclusion II: $A > S$

Here, we can see the opposite sign between A and S, thus no relationship can be established between them.

Thus conclusion II does not follow.

Therefore only conclusion I follows.

Hence option A is correct.

2. **Statements:** $Y < O \leq G \leq K = U > L > P$

Conclusions: $O = U$, $U > O$

Here, the common sign between O and U is ' \leq ', hence $O \leq U$.

Thus, either $O < U$ or $O = U$.

Therefore either conclusion I or II follows.

Hence option B is correct.

3. **Statements:** $M < T < G \leq J = U > Y > R$

Conclusions: $G < U$, $J > R$

Here, the common sign between G and U is ' \leq ', hence $G < U$ does not follow.

Therefore conclusion I does not follow.

And, the common sign between J and R is '>', thus $J > R$ follows.

Therefore conclusion II follows.

Hence option C is correct.

4. **Statement:** $3 \geq 9 < 7 \leq 10 = 2 \leq 6$
Conclusions: I. $6 > 9$ II. $9 \leq 2$

Checking conclusion I: $6 > 9$

From the given statement, we get:

While moving from 6 towards 9, the common sign of inequalities is '>' and the given conclusion is also ' $6 > 9$ '. Clearly, C1 follows.

Checking conclusion II: $9 \leq 2$

In the statement $9 < 7 \leq 10 = 2$, the common sign of inequalities between 9 and 2 is '<' whereas the given conclusion is ' $9 \leq 2$ '. Therefore, C2 doesn't follow.

Option A is hence the correct answer.

5. **Statement:** $P \leq R \leq C = S > Q > T$
Conclusions: I. $P < Q$ II. $S \geq P$

Checking conclusion I: $P < Q$

From the given statement, we get: $P \leq R \leq C = S > Q$

The common sign of inequalities between P and Q are reversed and therefore no definite conclusion can be withdrawn between these two elements. Hence, C1 doesn't follow.

Checking conclusion II: $S \geq P$

As we can see that in the given statement while moving from S towards P, the common sign between these two elements is '≥' and the given conclusion is also $S \geq P$. Therefore, C2 follows here.

Option B is hence the correct answer.

6. **Statements:** $L \geq Y \geq A < R$, $S > Q = A \geq I$
Conclusions: $S > Y$, $R > Q$

For conclusion I: $S > Y$

Combining statements I and II, we get:

$$S > Q > A \leq Y$$

Here, we get opposite signs between S and Y and given conclusion is $S > Y$, thus we cannot define any relation between S and Y. Hence, $S > Y$ does not follow.

For conclusion II: $R > Q$

Combining statements I and II, we get:

$$Q = A < R$$

Here, the common sign between R and Q is '>' and the given conclusion is $R > Q$. Hence, $R > Q$ follows. Hence, the correct answer is option B.

7. **Statements:** $M < A \leq P > X$, $P \geq B = C < Y$, $C \geq D > F = L$

Conclusions: $P \geq D$, $M < C$

For conclusion I: $P \geq D$

Combining statements II and III, we get:

$$P \geq B = C \geq D$$

Here, the common sign between P and D is ' \geq ' and given conclusion is $P \geq D$. Hence, $P \geq D$ follows.

For conclusion II: $M < C$

Combining statements I and II, we get:

$$M < A \leq P \geq B = C$$

Here, we get opposite signs between M and C and given conclusion is $M < C$, thus we cannot define any relation between M and C. Hence, $M < C$ does not follow.

Hence, the correct answer would be only conclusion I follows.

Hence, the correct answer is option A.

8. **Statements:** $J = X \leq U > Z$, $M = N \geq U = P$, $L = O < N \geq T$

Conclusions: $J < N$, $O > U$

For conclusion I: $J < N$

Combining statements I and II, we get:

$$J = X \leq U \leq N$$

Here, the common sign between J and N is ' \leq ' and the given conclusion is $J < N$. Hence, $J < N$ does not follow.

For conclusion II: $O > U$

Combining statements II and III, we get:

$$O < N \geq U$$

Here, we get opposite sign between O and U and the given conclusion is $O > U$, thus we cannot define any relation between O and U. Hence, $O > U$ does not follow.

Hence, the correct answer is option E.

9. **Statements:** $H \geq V = O > R$, $X \leq D > Y > R$, $Y > N = L < Z$

Conclusions: $O < D$, $R > N$

For conclusion I: $O < D$

Combining statements I and II, we get:

$$O > R < Y < D$$

Here, we get opposite signs and the given conclusion is $O < D$, thus we cannot define the relation between O and D. Hence, $O < D$ does not follow.

For conclusion II: $R > N$

Combining statements II and III, we get:

$$N < Y > R$$

Here, also we get opposite signs and the given conclusion is $R > N$, thus we cannot define the relation between R and N. Hence, $R > N$ does not follow.

Hence, the correct answer would be neither conclusion I nor II follows.

Hence, the correct answer is option A.

10. For conclusion I: $O = X$
Combining statement I and II, we get:

$$O = C < R = X$$

Here, the common sign between O and K is ' $<$ ' and the given conclusion is $O = X$, hence, $O = X$ does not follow.

For conclusion II: $I < R$

Combining the statements I and III, we get:

$$I = L < X = R$$

Here, the common sign between I and R is ' $<$ ' and the given conclusion $I < R$, hence, the $I < R$ follows.

Hence, the correct answer would be only conclusion II follows.

Hence, the correct answer is option D.
