E. None of these

**Correct Answers:**

1	2	3	4	5	6	7	8	9	10
D	C	A	C	C	D	C	A	C	B

Explanations:

1.

Sir Timothy John Berners-Lee (born 8 June 1955), also known as TimBL, is an English computer scientist, best known as the inventor of the World Wide Web.

Hence, the option D is correct.

2.

Except Light storage all other terms belong to information technology.

Cyber space: The virtual space created by interconnected computers and computer networks on the Internet. Cyberspace is a conceptual electronic space unbounded by distance or other physical limitations.

Upload: Uploading means data is being sent from your computer to the Internet. Examples of uploading include sending email, posting photos on a social media site and using your webcam. Even clicking on a link on a web page sends a tiny data upload.

Modem: The word modem is actually short for Modulator/Demodulator. A modem is a communications device that can be either internal or external to your computer. It allows one computer to connect another computer and transfer data over telephone lines.

Hence, the option C is correct.

3.

Spam is related to computer.

Spam: Irrelevant or unsolicited messages sent over the Internet, typically to large numbers of users, for the purposes of advertising, phishing, spreading malware, etc.

Hence, the option A is correct.

4.

Passwords enables users to retain confidentiality of files.

Password: A password is an unspaced sequence of characters used to determine that a computer user requesting access to a computer system is really that particular user. Typically, users of a multiuser or securely protected single-user system claim a unique name (called a user ID) that can be generally known. In order to verify that someone entering that user ID really is that person, a second identification, the password, known only to that person and to the system itself, is entered by the user.

Hence, the option C is correct.

5.

Transmission of files and messages through computer network.

E-mail (electronic mail) is the exchange of computer-stored messages by telecommunication. E-mail messages are usually encoded in ASCII text. However, you can also send non-text files, such as graphic images and sound files, as attachments sent in binary streams.

6.

A chat is a real time typed conversation.

Chat: Real-time communication between two users via computer. Once a chat has been initiated, either user can enter text by typing on the keyboard and the entered text will appear on the other user's monitor.

7.

Downloading is the transmission of a file from one computer system to another, usually smaller computer system. From the Internet user's point-of-view, to download a file is to request it from another computer (or from a Web page on another computer) and to receive it.

8.

Secret code that restricts entry in the same programs is password.

Password: A password is an unspaced sequence of characters used to determine that a computer user requesting access to a computer system is really that particular user. Typically, users of a multiuser or securely protected single-user system claim a unique name (called a user ID) that can be generally known. In order to verify that someone entering that user ID really is that person, a second identification, the password, known only to that person and to the system itself, is entered by the user.

9.

Sending an e-mail is like a writing a letter.

E-mail: Electronic mail is the exchange of computer-stored messages by telecommunication.

10.

E-commerce allows companies to Conduct business over the internet.

EC: E-commerce (electronic commerce or EC) is the buying and selling of goods and services, or the transmitting of funds or data, over an electronic network, primarily the Internet. These business transactions occur either business-to-business, business-to-consumer, consumer-to-consumer or consumer-to-business.
