## Common Explanations (1-5):

### Reference:

Twelve people were seated around a triangular table facing inwards such that three people were seated on each edge and one person on each corner.

### Inference:

We prepare following arrangement.

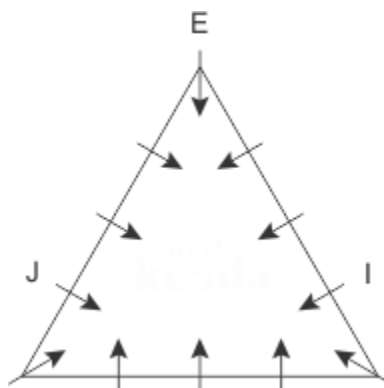

### Reference:

Only five people sit between J and I; neither J nor I sits at corner. E who sits at one of the corner is third to the right of I.

A, B and C were seated in the middle of each edge.

### Inference:

J cannot sit in the middle, only one choice we have to put J.

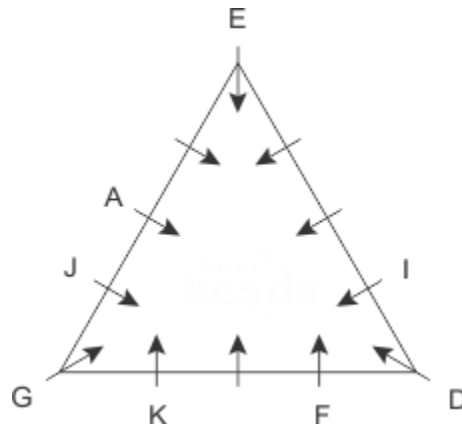

### Reference:

F, who is immediate neighbor of I, is immediate left of D.

Only two people sit between F and G, who is immediate neighbor of J.

**Inference:**

D must be left of I only then we can put G at third to F immediate to J.

**Reference:**

Two people sit between K and A, who doesn't sit near I.

A, B and C were seated in the middle of each edge.

E is an immediate neighbor to both L and H, who is an immediate neighbor to B.

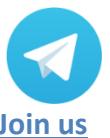

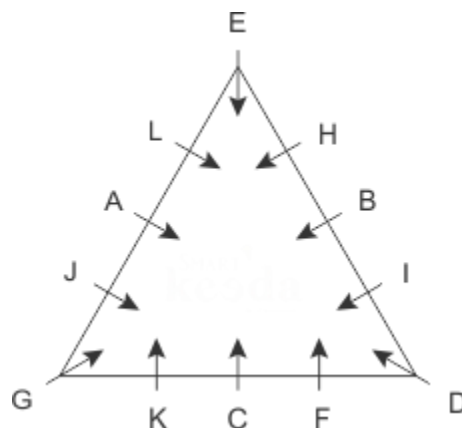

**Inference:**

A must be immediate to J.

H and B must be on same edge near I.

Only one place would be left where C would sit.

**Final arrangement:**

**1.** From final arrangement we see that D sits at the corner.

Hence, option D is correct.

**2.** From final arrangement we see that A and J sit between them.

Hence, option C is correct.

**3.** From final arrangement we see that D sits at third to the right of K.

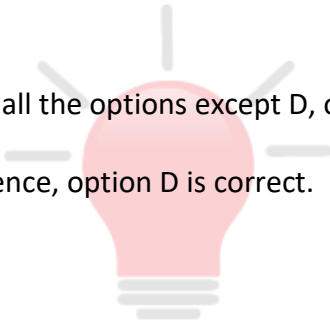

Hence, option A is correct.

**4.** From final arrangement we see that F is an immediate neighbor of C.

Hence, option C is correct.

**5.** In all the options except D, one member of the pair sits at the corner.

Hence, option D is correct.
