Common Explanations (1-5)

The input consists of both numbers and words. The output contains numbers and words one after another. Both are arranged in ascending and descending order respectively.

Only one element (either word or number) is arranged one at a time.

In the first step, the smallest number is shifted forward and in the second step, the word based on descending alphabetical order is shifted.

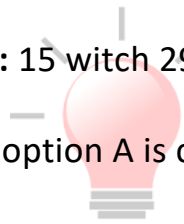

1. **Step III:** 15 witch 29 93 86 shell topper buy

Step IV: 15 witch 29 topper 93 86 shell buy

Step V: 15 witch 29 topper 86 93 shell buy

Step VI: 15 witch 29 topper 86 shell 93 buy

Hence, option A is correct.

2. **Input:** stain hobby 39 67 all men 86 59

Step I: 39 stain hobby 67 all men 86 59

Step II: 39 stain 59 hobby 67 all men 86

Step III: 39 stain 59 men hobby 67 all 86

Step IV: 39 stain 59 men 67 hobby all 86

Step V: 39 stain 59 men 67 hobby 86 all

Since the last step is Step V, so total number of steps is five.

Hence, option E is correct.

3. In the given problem, the previous steps are not possible to be determined. We can't determine the previous step of an output because element in previous stem can be placed anywhere.

Input: 'nest 79 53 gorgeous for 46 29 take'

Hence, option D is correct.

4. **Input:** nest 79 53 gorgeous for 46 29 take

Step I: 29 nest 79 53 gorgeous for 46 take

Step II: 29 take nest 79 53 gorgeous for 46

Step III: 29 take 46 nest 79 53 gorgeous for

Step IV: 29 take 46 nest 53 79 gorgeous for

Hence, option B is correct.

5. **Step II:** 19 yellow 85 74 next goat 26 steal

Step III: 19 yellow 26 85 74 next goat steal

Step IV: 19 yellow 26 steal 85 74 next goat

Step V: 19 yellow 26 steal 74 85 next goat

Step VI: 19 yellow 26 steal 74 next 85 goat

Since total number of steps is 6, so the required number of steps is four.

Hence, option D is correct.
