# Alpha Numeric Symbol Series Questions for SBI Clerk Pre & IBPS Clerk Pre Exams.

## Alpha Numeric Symbol Series Set 11

**Directions:** Following questions are based on the six three-digit numbers given below:

428 548 943 297 567 459

**1.** If 2 is subtracted from the last digit of each of the numbers how many numbers thus formed will be divisible by 3?

- A. Only one      B. Two      C. More than three      D. Four      E. None of these

**2.** If in each number the first and the second digits are interchanged then which will be the highest number?

- A. 428      B. 297      C. 459      D. 548      E. None of these

**3.** What will be the multiplication of the square of the middle digits of the second lowest and the second highest number?

- A. 169      B. 225      C. 144      D. 196      E. None of these

**4.** If the positions of the first and the third digits of each number are interchanged, what will be the difference between middle digits of the lowest and the highest number?

- A. 1      B. 2      C. 3      D. 4      E. None of these

**5.** What is the multiplication of all the digits of the resultant number formed by the difference of the two highest numbers?

- A. 201      B. 145      C. 136      D. 126      E. None of these

**Correct Answers:**

1	2	3	4	5
B	B	C	A	D

## Explanations:

### 1. The given numbers:

428 548 943 297 567 459

Applying the above condition in the given sequence, we get:

426 546 941 295 565 457

Here, we can see the 426 and 546 are divisible by 3.

Hence, the correct answer is option B.

### 2. The given numbers:

428 548 943 297 567 459

Applying the above condition in the sequence, we get:

248 458 493 927 657 549

Now, arranging all the numbers in ascending order, we get:

248 458 493 549 657 927

Highest number will be 297.

Hence, the correct answer is option B.

### 3. The given numbers:

428 548 943 297 567 459

Arranging all the numbers in ascending order, we get:

297 428 459 548 567 943

The second lowest number = 428, the middle digit of 428 is 2.

The second highest number = 567, the middle digit of 567 is 6.

Square of 2 = 4

Square of 6 = 36

Multiplication of 4 and 36 = 144

Hence, the correct answer is option C.

**4. The given numbers:**

428 548 943 297 567 459

After applying above condition, we get:

824 845 349 792 765 954

Now, arranging all the numbers in ascending order, we get:

349 765 792 824 845 954

The lowest and the highest number of the sequence are 349 and 954 respectively.

The middle digit of 349 = 4

The middle digit of 964 = 5

Now, difference between the middle digits of these two numbers =  $5 - 4 = 1$

Hence, the correct answer is option A.

**5. The given numbers:**

428 548 943 297 567 459

Arranging all the numbers in ascending order, we get:

297 428 459 548 567 943

The two highest numbers are 567 and 943.

Now, required difference =  $943 - 567 = 376$

Multiplication of all the digits of 376 =  $3 \times 7 \times 6 = 126$

Hence, the correct answer is option D.
